Feature:

1. High security and reliability

- 1) Different types of plugs and sockets prevent mis-insertion due to different plug clock positions, diameters and pole numbers, which is safe and reliable.
- 2) The ground pole socket in the socket is longer than the phase pole socket, which ensures that the ground pole is first connected when plugging, and the ground pole is finally separated when it is pulled out, which is very safe.
- 3) The elastic sleeve is added to the insert sleeve to ensure good contact with the plug after the connection, so as to avoid burning the plug socket due to poor contact heat; high protection level. Can be used under poor environmental conditions.
- 4) The anti-drop device is installed to greatly improve the safety and reliability of the plug and socket power connection.

2. It is made of high quality engineering plastic nylon (PA66).

High temperature resistance, good insulation performance; resistant to impact, not afraid of falling and stepping on, overcoming the shortcomings of the old plug and socket falling and fragile.

3. Easy to use

The new generation of industrial plugs and sockets are widely used because of their versatility, high safety and reliability, quick installation, convenient connection and insertion, simple operation, and wide variety of specifications, suitable for user selection and international integration.
