Product Description

Product Description

DC Solar Fuse Application:

A range of 10x38mm fuse links specifically designed for protectin photovoltaic strings. These fuse links are capable of interrupting low overcurrents associated with faulted photovoltaic string arrays (reverse current, multi-array fault).

DC Fuse mainly used in DC combiner box in Solar PV System. When PV panel or inverter caused overload or short circuit, it trip off immediately, to protect PV panels, DC fuse also used to protect other electrical parts in DC circuit, when overload or short circuit.

Ceramic Fuse Link High Quality series of fuse consists of fuse link and fuse base. The variable cross-section fuse body made by pure copper piece (or copper wire, silver wire, silver piece) is sealed in the fusion tube which is made by the high strength porcelain or epoxy glass cloth pipe, there is full of the high-purity quartz sand processed after chemistry to take the extinguishing of arc medium in the tube. The two sides of the fuse use the spot welding to reliably connect with the end plate and to form the cylindrical cap shape structure. Fuse base suppressed by the resin or plastic casing fitted with contacts and contains the fusion pieces, the connection made by riveting as the support of the appropriate size fuse body parts. This series of fuse has many merits such as small in size, convenient for installation, safe in usage, beautiful in appearance and so on.
