## Product Description

### Product Description

Looking at the world, the 1500V system has become a necessary condition for large-scale photovoltaic power plants to reduce costs and increase efficiency. In countries with low electricity prices such as India and Latin America, the 1500V scheme is almost entirely adopted in the bidding of large-scale ground photovoltaic power plants. In countries with developed power markets such as Europe and the United States, the DC voltage has also been switched from 1000V to 1500V photovoltaic systems. Golden has been closely following the development trend of the world, continuously optimized and upgraded the core technology, and launched 1500V circuit protection products.

CFPV-63T 1500Vdc holders are finger-safe designed to meet with IEC and UL standards to the IP20 grade of protection. The fuse holders are made of tough and durable thermoplastic material. CFPV cylindrical fuse holders are available with and without visual indicator and available in 1-, 2- and 3-pole. CFPV-63T is especially recommended to be used in combination with CFPV1085 and CFPV1485 PV fuse links.
