Product Description

1. A3 steel housing, makes small size, light weight, beautiful appearance and low working vibration.
 2. flange connection ensures good strength, easy installation and maintenance.
 3. enhanced fiberglass turbine blades with optimized aerodynamic shape design and structural design, can lower start wind speed and higher wind energy utilization.
- The blade is coated by gel coat resin and painted to resist corrosion by air and water.
4. the automatic-yaw tail rudder empowers this horizontal swing-tail wind turbine (the tail automatically swings in high wind and automatically return in safe wind) a higher anti-typhoon capacity.
 5. permanent magnet external rotor design, reduced the resistance torque and very good heat dissipation performance compared to inner rotor generators.
 6. 42NSH magnetic steel piece has stronger magnetism and higher temperature resistance.
 7. F-class enameled wire could stand 150 degrees temperature; coil operation safety is ensured.
 8. the body shell is dacromet coated and twice anti-corrosion painted, to ensure rust free after a longtime operation

- 1.low start up speed; high wind energy utilization; beautiful appearance; low vibration.
- 2.Human friendly design, easy installation, maintenance and repair.
- 3.precise injection molding blades together with the optimized design of aerodynamic contour and structure, the blades have such advantages: high utilization of wind energy which contributes to the annual energy output.
- 4.the generators, adopting patented permanent magnet rotor alternator,with a special kind of stator design, efficiently decrease resistance torque.Meanwhile, it makes the wind turbines match the generators quite well and increase its reliability.
