Product Description

Product Description

TK series terminals block

In the electric connection, using the terminal as the transition connection is a common connection method, in various connection terminal structure, using the plate connection method, a long-standing practice test, safe and reliable connection way. The correct choice of wiring mode mainly depends on the actual use needs and the use of the requirements of the environment conditions, plate crimp wiring direct, convenient, solid and reliable. TK terminal rated voltage 600V, rated current divided into 10A, 20A, 30A, 40A, 60A, 100A, 150A total of seven specifications, can connect conductor section 0.75-35mm², wiring is convenient, stuck in the guide rail, with round wire or fork-shaped cold-pressed terminal wiring, easy installation, easy to replace.

Advantage:

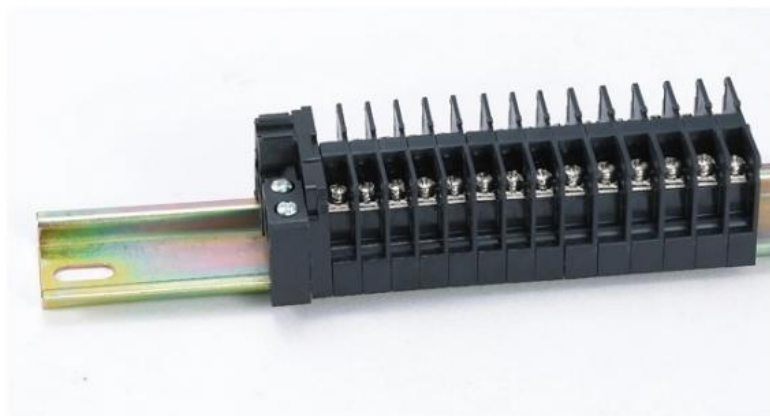

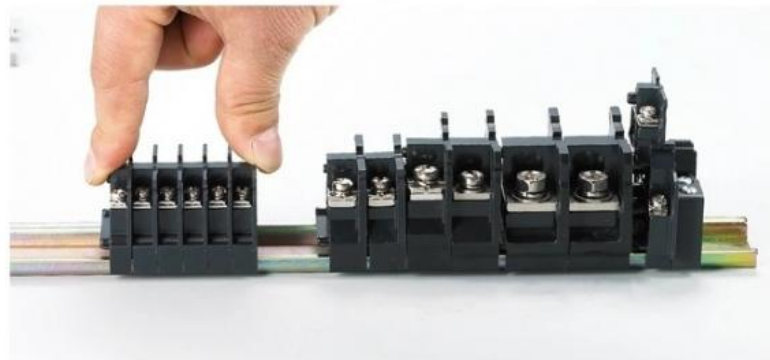

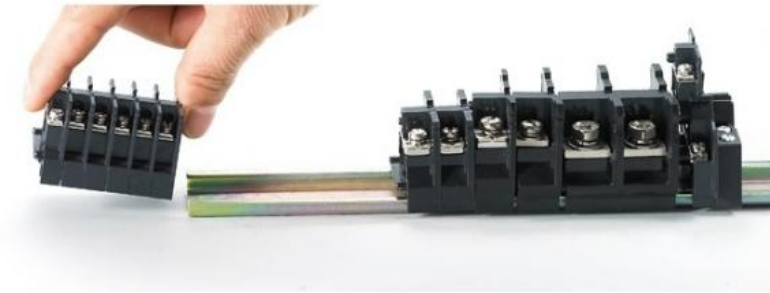

1. Reasonable installation design, strong versatility, TK type can be installed.
2. The shell adopts flame-retardant material, which reduces the hidden danger of safety and is safer for long-term use.
3. Copper sheet is selected as conductive material, with good conductivity and low resistivity.
4. Combined assembly design, according to the actual increase or decrease the number of terminals.
